

CSS background-origin & background-clip Test Page

Each box has border: 8px solid #333 and padding: 12px. Three regions: border-box (full), padding-box (inside border), content-box (inside padding).

1 — background-origin: Solid Color

Solid colors fill the clip area regardless of origin — this verifies no rendering errors.

default (padding-box)
background-color: steelblue

border-box
background-origin: border-box

padding-box
background-origin: padding-box

content-box
background-origin: content-box

2 — background-origin: Linear Gradient

Gradient coordinate space shifts with origin. border-box spans the full box; content-box spans only the content area.

default (padding-box)
background: linear-gradient(to right, red, blue)

border-box
background-origin: border-box

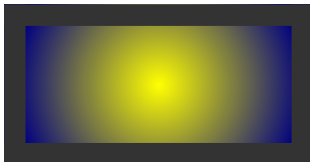

padding-box
background-origin: padding-box

content-box
background-origin: content-box

3 — background-origin: Radial Gradient

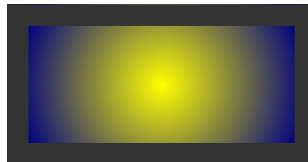

Radial center and radius are computed from the origin rect. content-box produces a more compressed gradient.

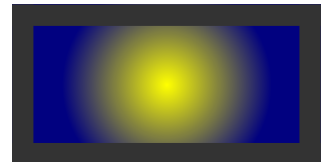

default (padding-box)
background: radial-gradient(circle, yellow, navy)

border-box
background-origin: border-box

padding-box
background-origin: padding-box

content-box
background-origin: content-box

4 — background-clip: Solid Color

background-clip controls where the background is painted. padding-box: no color behind border. content-box: color only in content area.

default (border-box)
background-color: coral

border-box
background-clip: border-box

padding-box
background-clip: padding-box

content-box
background-clip: content-box

5 — background-clip: Linear Gradient

Gradient fills the origin area but is clipped to the clip area.

default (border-box)

background: linear-gradient(to right, orange, purple)

border-box

background-clip: border-box

padding-box

background-clip: padding-box

content-box

background-clip: content-box

6 — background-origin + background-clip: Combinations

origin: border, clip: border

origin: border-box; clip: border-box

origin: padding, clip: padding

origin: padding-box; clip: padding-box

origin: content, clip: content

origin: content-box; clip: content-box

origin: border, clip: padding

origin: border-box; clip: padding-box

7 — background-origin + background-clip: More Combinations

origin: border, clip: content

origin: border-box; clip: content-box

origin: padding, clip: content

origin: padding-box; clip: content-box

origin: content, clip: padding

origin: content-box; clip: padding-box

origin: content, clip: border

origin: content-box; clip: border-box

8 — Shorthand with Origin/Clip Tokens

A single box-model keyword in the shorthand sets both origin and clip; two keywords set origin then clip.

single keyword — padding

background: steelblue padding-box

single keyword — content

background: coral content-box

gradient padding-box content-box

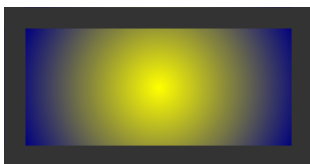

linear-gradient padding-box content-box

gradient border-box padding-box

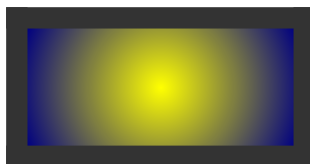

linear-gradient border-box padding-box

9 — Radial Gradient + Clip Combinations

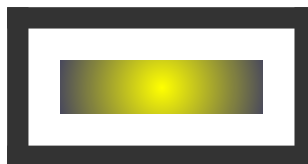

radial, clip: border-box

radial; clip: border-box

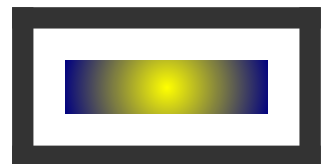

radial, clip: padding-box

radial; clip: padding-box

radial, clip: content-box

radial; clip: content-box

radial, origin+clip: content

origin: content-box; clip: content-box
